PROFESSIONAL SUMMARY

Data Engineering-focused Information Technology student at PVG COET with hands-on experience designing and deploying automated data pipelines, ETL workflows, and distributed data processing systems using Python, SQL, FastAPI, and AWS. Proven ability to architect multi-source data ingestion systems, vector databases, and real-time streaming pipelines. GUVi National Hackathon Finalist.

EDUCATION

Pune Vidyarthi Griha's College of Engineering and Technology

Bachelor of Engineering - Information Technology | Pune, India | Expected May 2028 (2nd Year)

Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Data Modeling, Distributed Systems

TECHNICAL SKILLS

- **Languages:** Python, SQL, JavaScript, TypeScript, C++, Java
- **Data Engineering:** ETL/ELT Pipeline Design, Data Warehousing, Data Modeling, Schema Design, Log Event Processing
- **Databases & Storage:** PostgreSQL, MySQL, ChromaDB (Vector DB), DynamoDB, SQL Query Optimization, Data Lake Architecture
- **AWS & Cloud:** Amazon S3, AWS Glue, Amazon Redshift, AWS Lambda, Amazon Athena
- **Frameworks:** FastAPI, Apache Kafka, Pandas, NumPy, LangGraph, React, Node.js, Next.js, Streamlit, OpenAI Agents SDK
- **AI/ML & Analytics:** Groq LLaMA 3.3 70B, Multi-Agent Orchestration, RAG, Semantic Search, ElevenLabs TTS

PROJECTS

Competitor Intelligence Engine - Automated ETL Data Pipeline

- Designed and implemented a 4-agent ETL pipeline that autonomously ingests multi-source competitor data.
- Built a data schema for structured competitor records and sales battlecards; automated data quality validation.
- Architected a full-stack SaaS product with FastAPI backend, React dashboard, and Stripe monetization layer.

HIREPATH - Autonomous Recruitment Data Pipeline

- Architected a 5-stage stateful data pipeline (SCOUT to TRACK) using LangGraph orchestration.
- Built a FastAPI backend with ChromaDB vector storage and SQL-backed candidate profiles.
- Developed a React frontend with real-time WebSocket pipeline visibility.

Verified Professional Network - Biometric Data Platform

- Designed and implemented a data schema for biometric authentication records and user identity logs.
- Secured enterprise-grade user data flows through multi-layer biometric verification.

Cybersecurity Threat Intelligence Pipeline

- Engineered a proactive adversarial AI agent that autonomously collects, parses, and stores IOC data.
- Simulated multi-persona attacker engagement, capturing structured IOC records in machine-readable format.
- GUVi National Hackathon Finalist (2024-25).

Voice Customer Support Agent - Real-Time Streaming System

- Developed a real-time voice support agent integrating Groq LLM inference with ElevenLabs TTS.
- Resolved critical async/event-loop conflicts and SDK API mismatches.

ACHIEVEMENTS

- **GUVi National Hackathon Finalist (2024-25):** Selected among top student teams nationally for the Cybersecurity Threat Intelligence Agent.

- **Agentic AI Hackathon Competitor:** Presented the production-grade HIREPATH 5-agent data pipeline system.

- **Academic Excellence:** Consistent top performer in DBMS and DSA; independently built production-grade data engineering projects.
